Crested gecko - Wikipedia

Crested geckos are quite beautiful, with a yellow or brownish body and white stripe along the back. They come in a variety of color morphs, including tans, yellows, oranges, reds, greens, and a even few darker colors. Crested geckos will lose (or drop) their tails under stress; it will not regrow once lost.

Crested Geckos: From the Experts at Advanced Vivarium ...

My crested gecko has lost his stick. He eats only repashy diet. His humidity should be fine. I have him out a lot. He wants to be. Also I've noticed all my other crested geckos have nails. He seems to be missing them, however, he had no problem before the last couple months. He's 49 grams with tail. Oh, and his tail pad sticks well still.

Six Ways To Tell A Crested Gecko Is A Male Or Female

The author of this book, Philippe De Vosjoli, is the co-author with Frank Fast and Allen Repashy of a longer book on Crested Geckos and related species called *Rhacodactylus: A Complete Guide to their Selection and Care*. This book is considered the "Bible" on Crested Geckos and related species.

Crested Gecko

Crested Geckos From The Experts

Crested Geckos are native to southern New Caledonia, an island chain just east of Australia, and their name comes the small projections on their head and top of their eyes, which also earned them the nickname "Eyelash Geckos." "Crested Geckos have since become unavailable for export, but this hardy and rewarding species has become so successful in captivity that they are one of the most widely kept geckos today."

The crested gecko marking is doing well, too. There are a lot of breeders working with them now, compared to 1998 when I got my first geckos. There are so many color and pattern morphs being developed. I just set up another dozen breeding groups of them yesterday. I couldn't believe the colors of some of the geckos I was putting into groups.

I have a crested gecko. One of her eyes is cloudy and she ...

The older the crested gecko gets, the easier it is to determine their sex. You can easily identify a male crested gecko by its bulge. Males cresties bulge starts showing when they are 5-8 months old. There are some rare cases where the bulge will not show until 14 months.

gecko native to southern New Caledonia. In 1866, the crested gecko was described by a French zoologist named Alphone Guichenot. This species was thought extinct until it was rediscovered in 1994 during an expedition led by Robert Seipp. Along with several Rhacodactylus species, it is being considered for protected status by the Convention on the International Trade in Endangered Species of Wild Flora and Fauna. It is popular in the pet trade.
