ethology and psychopharmacology

Ethology is the scientific and objective study of animal behaviour, usually with a focus on behaviour under natural conditions, and viewing behaviour as an evolutionarily adaptive trait. Behaviourism as a term also describes the scientific and objective study of animal behaviour, usually referring to measured responses to stimuli or to trained behavioural responses in a laboratory context ...

Ethology And Psychopharmacology [EBOOK]

Human ethology is the study of human behavior. Ethology as a discipline is generally thought of as a sub-category of biology, though psychological theories have been developed based on ethological ideas (e.g. sociobiology, evolutionary psychology, attachment theory, and theories about human universals such as gender differences, incest avoidance, mourning, hierarchy and pursuit of possession).

Human ethology - Wikipedia

The study of animal behavior is a cornerstone of psychology for several reasons. Ethology, or the study of animals in their natural habitats, sheds light on how animals interact with each other ...

Ethology - Wikipedia

Ethology is a branch of biology that focuses on animal behavior. It originated in European zoology in the 1930s and revolved around the study of instinctive and fixed-action patterns of behavior. Ethologists study the animal's behavior in its natural environment rather than in a laboratory. Ethology paved the way for comparative psychology.
