## Atmosphere & Greenhouse Gases - ATHENAS

The enhanced greenhouse effect caused by a greater buildup of carbon dioxide and methane (and other greenhouse gases) leads to less radiated heat leaving the atmosphere, resulting in warmer global temperatures. Scientists are confident that human burning of fossil fuels is a major contributor to the enhanced greenhouse effect.

technologies or approaches that remove carbon dioxide from power plants or other emissions, in an effort to mitigate global climate change Kyoto Protocol an international agreement drafted in 1997 that calls for nations to reduce, by 2012, emissions of six greenhouse gases to levels lower than their levels in 1990

## **Earth breaks September heat record, may reach warmest year**

Scientists have noted marked changes that have altered global weather patterns. Collectively, these changes are called global climate change and include a worldwide increase in temperature due primarily to rising levels of atmospheric carbon dioxide. There are several causes of global climate change, including human activity.
