Summary Annotation In the past, determination of bone maturity relied on visual evaluation of skeletal development in the hand and wrist, most commonly using the Greulich and Pyle atlas. The Gilsanz and Ratib digital atlas takes advantage of digital imaging and provides a more effective and objective approach to assessment of skeletal maturity.

Hand Bone Age: A Digital Atlas of

Skeletal Maturity ...

The bone age radiograph of the hand and wrist is a commonly performed examination to determine the radiographic age of the patient via the assessment of growth centers.

Hand Bone Age: A Digital Atlas Of Skeletal Maturity ...

A radiograph of the left hand has become the established tool for determining skeletal age in children aged 3 months and older. This method is easy to perform and requires very little radiation exposure. The technical parameters are as follows: • Free exposure at 30–45 kV and 3–6 mA

Hand Bone Age: A Digital Atlas of Skeletal Maturity ...

For decades, the determination of bone maturity has relied on a visual evaluation of skeletal development in the hand and wrist, most commonly using the Greulich and Pyle atlas. The Gilsanz and Ratib digital atlas takes advantage of the advent of digital imaging and provides a more effective and objective approach to skeletal maturity assessment.
