## Hypothermia - Wikipedia

In severe hypothermia, there may be paradoxical undressing, in which a person removes their clothing, as well as an increased risk of the heart stopping. Hypothermia has two main types of causes. It classically occurs from exposure to extreme cold. It may also occur from any condition that decreases heat production or increases heat loss.

Rowling - mild cold stress or hypothermia at this stage of cold stress we observe vigorous shivering if we look carefully we will see pulse and breathing rates above normal recall that the

### **Hypothermia And Cold Stress Cb [PDF, EPUB EBOOK]**

Hypothermia occurs when your body loses heat faster than it produces it. The most common causes of hypothermia are exposure to cold-weather conditions or cold water. But prolonged exposure to any environment colder than your body can lead to hypothermia if you aren't dressed appropriately or can't control the conditions.

### **Cold Stress Facts | Office of Environmental Health and Safety**

When most people think of hypothermia, they think of frigid temperatures or blizzard like conditions. Actually, hypothermia occurs most often in the spring and fall, rather than winter. Four factors contribute to cold stress: cold temperatures, high or cold wind, dampness and cold water. A cold environment forces the body to work harder to maintain its core temperature of 98.6 o F. Cold air, water, and snow all draw heat from the body.

### **Hypothermia - Symptoms and causes -**

## Mayo Clinic

When exposed to cold temperatures, your body begins to lose heat faster than it can be produced. Prolonged exposure to cold will eventually use up your body's stored energy. The result is hypothermia, or abnormally low body temperature. A body temperature that is too low affects the brain, making the victim unable to think clearly or move well.

## Cold Stress | NIOSH | CDC

Preventing Cold-related Illness, Injury, and Death among Workers Workers, both indoors and outdoors, in services, transportation, agriculture, construction, and other industries may be exposed to environmental cold stress that can lead to thermal discomfort and in some cases even severe injuries, illnesses, or death.
