Im taking a course on Operating System and Im kind of lost. Correct me if im wrong. As far as I know a process has code, data, stack, register and program counter. A thread is a sequence of programming instruction in a process, it shares code and data but not a stack and pointer. A process executes when an application is loaded into memory.

A quality management system (QMS) is a set of policies, processes and procedures required for planning and execution (production, development, service) in the core business area of an organization, (i.e. areas that can impact the organization's ability to meet customer requirements). ISO 9001:2015 is an example of a Quality Management System.
