Directly or indirectly, probability plays a role in all activities. For example, we may say that it will probably rain today because most of the days we have observed were rainy days. However, in mathematics, we would require a more accurate way of measuring probability. Introduction to Probability

Solution to Problem 1.8. Let  $p_i$  be the probability of winning against the opponent played in the  $i$ th turn. Then, you will win the tournament if you win against the 2nd player (probability  $p_2$ ) and also you win against at least one of the two other players [probability  $p_1 + (1 - p_1)p_3 = p_1 + p_3 - p_1p_3$ ]. Thus, the probability of winning the tournament is  $p_2(p_1 + p_3 - p_1p_3)$ .

Solution to Problem 1.14. (a) Each possible outcome has probability  $1/36$ . There are 6 possible outcomes that are doubles, so the probability of doubles is  $6/36 = 1/6$ . (b) The conditioning event (sum is 4 or less) consists of the 6 outcomes  $(1;1);(1;2);(1;3);(2;1);(2;2);(3;1)$ ; 2 of which are doubles, so the conditional probability of doubles is  $2/6 = 1/3$ .
