Isobars and isotherms are lines on weather maps which represent patterns of pressure and temperature, respectively. They show how temperature and pressure are changing over space and so help describe the large-scale weather patterns across a region in the map. Why do I care? Isobars and isotherms make it easier to read and analyze weather maps.

An isobar is a line of constant pressure. There are many other terms like these which are known collectively as "isopleths". Isotherms and isobars, plus other isopleths, are very helpful for weather forecasting. If you look at a map that just shows temperature for different cities, you won't be able to see the full pattern of the weather system.
