Abstract: This paper describes the Power System Analysis Toolbox (PSAT), an open source Matlab and GNU/Octave-based software package for analysis and design of small to medium size electric power systems. PSAT includes power flow, continuation power flow, optimal power flow, small-signal stability analysis, and time-domain simulation, as well as several static and dynamic models, including nonconventional loads, synchronous and asynchronous machines, regulators, and FACTS.

psat keeps a record of which directory you were in when you start running it, and in some cases tries to write file fm_call.m into that directory. The work-around is to make sure that psat is on your MATLAB path, and to start it running by name when you are cd'd to a directory that you have write access to.
