transform and iterating. Laboratory components of signals and systems courses are primarily based on textual modules. Although the ability to write textual codes is an important aspect of a lab component, students can enhance their understanding of signal processing concepts in these courses if they interactively experiment with their codes.

SIGNALS AND SYSTEMS LABORATORY 3: Construction of Signals in MATLAB
INTRODUCTION Signals are functions of time, denoted $x(t)$. For simulation, with computers and digital signal processing hardware, one must represent a signal as a vector. We limit the representation in two different ways: x is sampled and then only a finite number of samples is kept.
