Surgical Reconstruction of The Temporomandibular Joint ...

The ease, safety, and predictability of extensive exposure have led us to use this approach exclusively for surgical intervention in this region. It has been effectively used in cases of trauma, pathologic conditions, and reconstruction involving the TMJ. In addition to the cases reported in this series, the procedure may be adapted to oblique subcondylar oestotomies and to the treatment of a variety of regional neoplastic processes and other forms of TMJ dysfunctions that may be encountered.

TEMPOROMANDIBULAR JOINT RECONSTRUCTION | Pocket Dentistry

The ability to preserve the functional integrity of the facialnerve is a critical measure of success in temporomandibular joint (TMJ) surgery. [1] Despite the care taken during surgical interventions as well as surgeon's skill in the approach to the TMJ, the facial nerve is always at risk and it is difficult to provide adequate exposure ...

INTRODUCTION. Temporomandibular joint (TMJ) reconstruction presents unique problems because of the integral and complex roles the TMJ plays in establishing and maintaining proper form and function within the stomatognathic system. The TMJ not only acts as a secondary growth center for the mandible in prepuberty, but also is essential to the functions of mastication, speech, airway support, and deglutition in both childhood and adulthood.
